

# Deep-vein thrombosis, pulmonary embolism (or venous thromboembolic disease)

No medication is formally contraindicated.

### WHAT IS RECOMMENDED

---

- Follow the standard treatment for thrombosis and/or pulmonary embolism (anticoagulant treatment) having weighed the potential risks and benefits.
- Adapt the treatment to the patient's clinical condition (epistaxis, gastrointestinal bleeding, blood count).
- In the event of increased epistaxis while taking anticoagulation treatment, arrange for a consultation with an ENT doctor who has knowledge of the disease in order to consider appropriate treatment.
- Outside of an emergency situation, and depending on anti-coagulant tolerance, discuss alternative treatments (thrombectomy, cava filter) with the centre of reference or competence.

### WHAT YOU SHOULD NOT DO

---

- Avoid treating vascular thromboembolic disease because of hereditary haemorrhagic telangiectasia.
